VECTOR: pBACe3.6
NEIGHBORING SEQUENCE INFORMATION:
NEIGHBORING SEQUENCE do the left is RPI1-547F18; the clone sequenced to the right is RPI1-44B4, 200 base pair overlap. Actual end of this clone is at base position 18711 of RPI1-44B4.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                     Homo sapiens

New mouse and human polypeptides, useful to treat and diagnose neoplastic disorders e.g. carcinomas, sarcomas and leukemias Okano M, Xie S; WPI; 2000-106298/09. P-PSDB; AAY54057. Ľi Ε,

Claim 10; Fig 1C; 114pp; English

The present sequence encodes a human de novo DNA cytosine methyltransferase designated DNWT3A. The polypeptides can be administered methyltransferase designated DNWT3A. The polypeptides can be administered therapeutically, especially by expressing encoding polynucleotides, too treat diseases associated with DNA cytosine methyltransferase, such as coplastic diseases associated with DNA cytosine methyltransferase, such as coplastic disorders, comeson to diseases, or determine susceptibility to neoplastic disorders, comeson for compounds inhibiting/accitabledy finds. They are useful to screen for compounds inhibiting/accitabledy companyabetide. The polypeptides can also be used for in vitro de novo repulate DNA such in vitro methylation may be used to direct or requiate DNA expression in biological systems, e.g. recombinant DNA complyation of DNA such in vitro methylated in vitro may be introduced into a cell/organism to increase or decrease expression of a desired polypeptide can also be complyated for which the native DNA is under-methylated or not methylated. The polypeptides can also be complyated in the produce antibodies which are useful to detect and purify the polypeptide or therapeutically e.g. to treat neoplastic disorders. The coplymolectides are useful to produce probes and primers which are considered and primers which are

The present sequence encodes a murine de novo DNA cytosine methyltransferase designated bomuta. The polypeptides can be administered therapeutically, especially by expressing encoding polymucleotides, to treat diseases associated with DNA cytosine methyltransferase, such as neoplastic disorders e.g. carcinomas, sarcomes and leukemias. They can be used to disgnose, or determine susceptibility to neoplastic disorders, by assaying for polypeptide expression levels in mammalian cells/body fluids. They are useful to screen for compounds inhibiting/activating the polypeptide. The polypeptides can also be used for in vitro de novo methylation of DNA. Such in vitro methylation may be used to direct or regulate DNA expression in biological systems, e.g. recombinant DNA methylated in vitro may be introduced into a cell/organism to increase or decrease expression of a desired polypeptide for which the native DNA is under-methylated or not methylated. The polypeptides can also be used to produce antibodies which are useful to detect and purify the polypeptide or therapeutically e.g. to treat neoplastic disorders. The polymolectides are useful to produce probes and primers which are useful diagnostically.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      24;

```

The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or uroganical; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's

Claim 4; SEQ ID NO 953; 2081pp + Sequence Listing; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC methyltransferase designated DNMT3B1. The DNMT3B gene also produces, CC through alternate splicing, at least two shorter isoforms termed CC DNMT3B2 (comprising amino acids 1-355 and 376-853 of AAX54058, see AAX54058) and DNMT3B3 (comprising amino acids 1-355, 376-743 and 807-853 of AAX54058) asee CC of AAX54058, see AAX54060) (sequences not given in the specification). CC The polypeptides can be administered therapeutically, especially by CC parcinomas, sarcomas and leukemias. They can be used to disgnose, or CC determine susceptibility to neoplastic disorders, by assaying for CC polypeptide can also be used for in vitro de novo methylation of DNA. CC carcinomas and leukemias. They can be used to disgnose, or CC polypeptide can also be used for in vitro de novo methylation of DNA. CC such in vitro methylation may be used to direct or regulate DNA. CC such in vitro methylation may be used to direct or regulate DNA. CC such in vitro methylation as cell/organism to increase or decrease cunder-methylated or not methylated. The polypeptides can also be used to direct or regulate DNA is cunder-methylated or not methylated. The polypeptides can also be used to direct and purify the polypeptide cunder-methylated which are useful to detect and purify the polypeptide cor therapeutically e.g. to treat neoplastic disorders. The polypeptide or therapeutically e.g. to treat neoplastic disorders which are useful to acted and primers which are useful to produce probes and primers which are useful to produce probes and primers which are useful

The present sequence encodes a murine de novo DNA cytosine
methyltransferase designated Dnmt3b1. The Dnmt3b gene also produces,
through alternate splicing, at least two shorter isoforms of 840 and
through alternate splicing, at least two shorter isoforms of 840 and
through alternate splicing, at least two shorter isoforms of 840 and
to given in the specification). The polypeptides can be administered
the appearance of the specification of the polypeptides can be administered
the specially by expressing encoding polynucleotides, to
therapeutically, especially by expressing encoding polynucleotides, to
therapeutically, especially by expressing encoding polynucleotides, to
therapeutically, especially by expressing encoding polynucleotides, uch as
neoplastic disorders e.g. carcinomas, sarcomas and leukemias. They can
be used to disorperide expression levels in mammalian cells/body
fluids. They are useful to screen for compounds inhibiting/activating the
polypeptide. The polypeptides can also be used for in vitro de novo
methylated in vitro may be introduced into a cell/organism to increase
or decrease expression of a desired polypeptide can also be
thylated to therapeutically are useful to detect and purify the
polypeptide or therapeutically e.g. to treat neoplastic disorders. The
polypeptide are useful to produce probes and primers which are
considered to produce antibodies which are useful to detect and purify the
polypeptide or therapeutically e.g. to treat neoplastic disorders. The
cuseful disgnostically.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1255

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1696
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1640
```

ঠ

ABQ56306 to ABQ60787 represent isolated nucleic acids (I) differentially expressed in cancer tissues. ABB78993 to ABB79004 represent proteins encoded by the ABQ60776 to ABQ60787 nucleic acid sequences. (I) can be used in antisense therapy. An antibody immunoreactive with a polypeptide encoded by (I) is useful for detecting cancer in a patient sample, and for detecting the presence or absence of a polynucleotide encoded by a nucleic acid which hybridises to (I) in a cell. A probe/primer derived from (I) can be used for determining the presence of a nucleic acid which hybridises to (I), and for determining the phenotype of cells in a sample

New isolated nucleic acid that is differentially expressed it tissues useful for determining the presence of colon cancer or tissue type, and in antisense therapy.

in in

n a cell

A AH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer-associated nucleic acid molecules (N) and proteins (P), where cancer-associated nucleic acid molecules (N) and proteins. The colon cancer antigens have cytostatic activity and can be used in gene cancer antigens have cytostatic activity and can be used in gene cherapy and vaccine production. N and P may be used in the prevention, changoosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient of separate and activity of P by expressing contains a patient of separate and activity of P by expressing P inactive proteins or to supplement the patients own production of P additionally. N may be used to produce the colon cancer-associated PB, by inscriting the nucleic acids into a host cell and culturing the cell and treatment of colorectal carcinomas and cancers. AH37196 to AH37204 and treatment of colorectal carcinomas and cancers. AH37196 to AH37204 present invention.

N IB Pages 66 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for expressing the interior.

SEQ ID NO:1027 to 1052, 7921 and 7922.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               õ
of cells from a patient. (I) is useful for determining the presence of colon cancer in a cell or tissue type, for determining the presence or state of other type of cancer, in antisense therapy, to generate macroarrays on a solid surface, to identify a chromosome on which the corresponding gene resides, and in tissue profiling, forensics, genetic analysis, mapping and diagnostic applications. (I) can be used to raise antibodies, and to screen for peptide analogues and antagonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2873

Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs -

Claim 8; SEQ ID 11099; 2537pp + CD ROM; English

complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs as as ily without any specialized methods. AAH03166 to AAH33628 and AAH431671 The AAH43673 The primers allow obtaining of the full-length cDNAs as a sily without any specialized methods. AAH03166 to AAH33628 and The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonuclectides, all of which are used in the exemplification the present invention. an oligonucleotide comprising a sequence complementary to the exemplification

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to isolated polymucleotide (I) and polypeptide (II) adquences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome polymucleotides are also used in disquestion of (II). The sequence tags continued the polymerased genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequence. Abs64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   polynuclectides. The microarray can be used in the diagnosis of cancers such as adenocarcinoma, leukaemia, lymphoma, melanoma, myeloma, sarcoma and tetratocarcinoma etc., immunopathology such as AIDS, Addison's disease, adult respiratory distress syndrome, allergies, anaemia, asthma, atherosclerosis and bronchitis etc., neuropathology such as Alzheimer's disease, ammesia, amyotrophic lateral sclerosis, bipolar disorder, catatonia and cerebral neoplasms etc. The microarray can also be used to investigate an individual's predisposition to a disease such as cancer, immunopathology or neuropathology. Also, the microarray can be used for investigating cellular response to infection, drug treatment etc. The microarray can be used for diagnostics, prognostics and treatment regimens, drug discovery and development, toxicological and carcinogenicity studies, forensics, pharmacogenomics etc. The array can be used for a disposition of the microarray can be used for a disposition of the microarray can be used for disposition of the microarray can be used for disposition of the microarray can be used for microarray can be used for disposition of the microarray can be used for an expectation of the microarray can be used for microarray can be used for disposition of the microarray can be used for an expectation of the microarray can be used for an expectation of the microarray can be used for a disposition of the microarray can be used for an expectation of the microarray can be used for a disposition of the microarray can be used for an expectation of the microarray can be used for a disposition of the microarray can be used for a disposition of the microarray can be used for an expectation of the microarray can be used for a disposition of the microarray can be used for a disposition of the microarray can be used for a disposition of the microarray can be used for a disposition of the microarray can be used for a disposition of the microarray can be used for an expectation of the microarray can be used for a disposition of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2532
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a composition comprising several polynucleotide probes. Probes can be derived from the present sequence. The probes are immobilised and are preferably useful as hybridisable array elements in a microarray for monitoring the expression of several
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2412 GCCGGCTCTTCTTTGAGTTCTACCGCCTCCTGCATGATGCGCGGCCCAAGGAGGAGGAAATG 2471

The GS (cene Signature) sequences were obtained from 3'-directed cDNA libraries prepared from various human tissues; synthesis of cDNA was initiated from the 3'-end of mRNA by using poly(T) as the sole primer. Since the 3'-c untranslated sequence is unique to a particular mRNA species, almost all the 3'-oriented cDNAs hybridise with specific mRNAs. Each library is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was derived. The appearance frequency of a given GS in a cDNA library can be gequences) as a means of diagnosing abnormal cell function or for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel method for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABM3503-ABM3455 in a cissue sample. The method of the invention has hepatocropic, and cortisty. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, drug efficacy and drug metabolism.

Control of the printed cancer disease states, disease progression, drug to monitor disease states, disease progression, but was obtained in electronic format directly from WIPO. The wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a method (M1) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical CC agent to be tested for anti-neoplastic activity, determining a change in CC expression of at least one gene (I) of a signature gene set, where (I) CC comprises a sequence (S) selected from 8447 sequences (given in ABL501664 CC to ABL70110), or is at least 95% identical to (S), where a change in CC expression is indicative of anti-neoplastic activity. (I) has cytostatic CC activity and can be used in gene therapy. M1 can be used for screening CC an anti-neoplastic agent, and can be used for producing a product which cl is the data collected with respect to the anti-neoplastic agent as a CC result of M1, and the data is sufficient to convey the chemical CC tructure and/or properties of the agent. M1 can be used in the CC treatment of cancer such as colon, breast, stomach, lung, thyroid, CC oesophageal, ovarian, kidney, prostate or pancreatic cancer, CC adenocarcinoma, carcinoma, clear cell cancer, infiltrating ductal cancer, CC cinfiltrating lobular cancer, squamous cell carcinoma, neuroendocrine CC carcinoma, papillary carcinoma and Wilm's tumour.

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone amony. Preast, gastrointestinal tract, liver, lung, or unogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune thyroiditis, diaberes mellitus, Crohn's disease, multiple sclerosis, rhoundatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. crebral anoxia and epilepsy; and (f) infections diseases such as viral, bacterial, fungal and parasitic infections.

Where The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/published_pct_sequences.
                                                                                                                                                                                                                                                                 Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             240
